PROFESSIONAL EXPERIENCE

Time Dynamics Inc. – Software Engineer — Houston, TX | Oct 2024 – Present

Energy trading and maritime logistics startup. Work spans trading software for energy traders, futures research and AI tooling.

- Own systematic trading strategies for Chinese commodity futures on a proprietary trading platform: research, validation, deployment and live monitoring. Testing on unseen data killed most ideas; several now trade live.
- Build and maintain the live trade management system energy traders run on: trade booking, daily mark to market, settlement and automated invoicing and payments (500+ invoices and payments submitted).
- Run the research with parallel Claude Code agents that write code, run backtests and verify results; strategy calls stay human. Also built an AI pipeline whose agents tried to disprove trade ideas using Chinese sources.
- Turned the trading platform's changing docs into a cited knowledge graph of 832 facts that every agent session checks first, after an agent wrongly said a task couldn't be done. Generalized it into kg, a Claude Code plugin that builds an audited graph from any doc set and shares it with a team in 1 command.
- Built a 5 agent AI prototype that read scanned port logs and charter contracts to calculate ship delay fees (demurrage), refusing to produce a fee when key contract terms were missing rather than guess at a money figure.
- Built the sign in backend (Google, Apple and Feishu/Lark login, workspace setup, team invites) and the entire public website (pricing, payments, docs) for TeamTurbo, the company's AI team workspace app, live since Aug 2025.

Pairbo Inc. – Software Engineer, 4th employee (part time from Oct 2024) — Remote | Sep 2024 – Feb 2025

- Built the software a Shopify greeting card startup ran on: admin dashboard, backend API, checkout integration and remote control of card printers in merchant warehouses, as it grew from 0 to 10+ partners.

CarGurus – Software Engineering Co-op, Platform as a Service — Boston, MA | Jul 2023 – Dec 2023

- Moved developer builds onto Kubernetes (10% faster), helped build a tool that standardized deployments (saving about 2 weeks of support a month) and cut developer environment cloud spend 45% with an idle cleanup Slack bot.

Oracle – Software Engineering Intern — Bengaluru, India | Jan 2022 – Jul 2022

- Built global rate limiting for a major US carrier's 5G network proxy in Java, keeping traffic within 5% of set limits across servers inside a 0.1% message loss budget.

WeLocal – Co-Founder & Full Stack Developer — Ahmedabad, India | May 2020 – Jan 2022

- Built web and mobile apps for a COVID era service linking shoppers to local stores: 600+ customers in 6 months.

PROJECTS

HQ – command center for AI coding agents, private, in daily use | TypeScript, Bun, React

- Runs a fleet of Claude Code agents from one screen: shows which are working, done or waiting for input, and routes each task to the cheapest model that keeps quality. Runs daily engineering work, including the trading research.

Clarvis – open source | TypeScript, Bun | github.com/shahsanket2107/clarvis

- Claude Code plugin showing live cost, context use and rate limits, with animated characters reacting to the agent.

LiveMandarin – open source | Swift, Python, Apple MLX | github.com/shahsanket2107/livemandarin

- Mac app that live captions and translates Mandarin and English from any call or video, fully on device. Benchmarked candidate models; a glossary kept key terms right 97 to 100% of the time vs about 70% with prompting.

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, SQL, Java, Ruby, Swift
Quant & Research	Backtesting, Walk Forward Validation, Statistical Testing, Pandas, NumPy, SciPy, scikit-learn, XGBoost, Optuna, CMA-ES
AI & Agents	Claude Code (Agents, Sub Agents, Skills, Plugins, Hooks), Claude API, Gemini API, Multi Agent Systems, Knowledge Graphs, RAG, LLM Evaluation
Engineering	Ruby on Rails, Node.js, FastAPI, React, Next.js, REST APIs, Docker, Kubernetes, AWS, CI/CD, RabbitMQ, Redis, MySQL

EDUCATION

Northeastern University – MS in Computer Science, GPA 4.0/4.0 — Boston, MA | Jul 2024

Nirma University – B.Tech in Computer Science and Engineering, GPA 8.68/10 — Ahmedabad, India | May 2022
