EDUCATION

Northeastern University, Khoury College of Computer Sciences Boston, MA | Sep 2022 – Jul 2024
Master of Science in Computer Science, GPA: 4.0/4.0 | Coursework: Algorithms, Machine Learning, MLOps, Distributed Systems, Database Design, Data Mining, Information Retrieval

Institute of Technology, Nirma University Ahmedabad, India | Jul 2018 – May 2022
Bachelor of Technology (B.Tech) in Computer Science and Engineering, GPA: 8.68/10 | Coursework: Data Structures, OOP/OOD, ML

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, SQL, Java, Ruby, Swift
AI & Agents	Claude Code (agents, sub agents, skills, plugins, hooks, mods), Claude API, Gemini API, Multi-agent Systems, Knowledge Graphs, RAG, LLM Evaluation, Document AI, MLX
Quant & Research	Walk-forward Validation, Backtesting, Pandas, NumPy, SciPy, scikit-learn, XGBoost, Optuna, numba
Backend & Frontend	Ruby on Rails, Node.js, Express, FastAPI, Flask, Spring Boot, React, Next.js, REST APIs, WebSockets
Infra & Data	Docker, Kubernetes, AWS, GCP, GitHub Actions, CI/CD, RabbitMQ, Redis, MySQL, Firestore

PROFESSIONAL EXPERIENCE

Time Dynamics Inc. – Software Engineer Houston, TX | Oct 2024 – Present
- Develop and run systematic strategies on Chinese commodity futures: about a year of research with walk forward validation, random null baselines and leakage checks, most ideas killed with written post mortems, several books now live.
- Built an 832 node cited knowledge graph from the company's changing docs, with a symptom index and mechanical audits, and made it default for every Claude Code session after an agent called a task impossible that the docs covered.
- Shipped that as kg, a Claude Code plugin (11 commands, 7 agents, 43 tests in CI), and wrote my own Claude Code skills. Run the work as parallel agent sessions through HQ, with strategy calls and live deploys kept human.
- Extended the Ruby on Rails, MySQL and RabbitMQ energy trading platform: trade lifecycle, Mark to Market pricing, settlements, and automated invoice and payment processing for 500+ submissions.
- Built a five agent maritime demurrage calculator on raw Claude and Gemini SDKs with Document AI, moving all time math into Python and blocking the calculation when key contract terms were missing.
- Built the teamturbo.io gateway in Node, Express and TypeScript (OAuth with Google, Apple and Feishu, workspace provisioning) and its Next.js site.

Pairbo Inc. – Software Engineer, 4th employee Remote | Sep 2024 – Feb 2025
- Built the React and TypeScript admin dashboard for orders, print jobs, merchants and analytics as it grew to 10+ partners.
- Wrote the Node.js and Express API, Shopify integration and WebSocket print job control for warehouse printers, plus CI/CD.

CarGurus – Software Engineering Co-op, Platform as a Service Boston, MA | Jul 2023 – Dec 2023
- Implemented Kubernetes Job backed remote builds for the internal developer platform (10% faster) and worked on a Kubernetes operator that standardized deploys, saving about two weeks a month of support.
- Cut cloud spend 45% with a Slackbot driven dev environment cleanup and $2.5k a month by moving nodes off AWS Europe.

Oracle – Software Engineering Intern Bengaluru, India | Jan 2022 – Jul 2022
- Implemented global egress rate limiting for Verizon's 5G Service Communication Proxy in Java and Spring Boot, synced with Oracle Coherence federated cache to land within 5% of target at under 0.1% message loss.

WeLocal – Co-Founder & Full Stack Developer Ahmedabad, India | May 2020 – Jan 2022
- Co-founded and built a mobile and web app on AWS with real time inventory; 600+ customers in 6 months.

PROJECTS

HQ – Bun, TypeScript, React, tmux
- Built a terminal command center that runs a fleet of Claude Code agents, routes each task to the cheapest model that holds quality, and shows which agent needs me. Measured my own token use and turned auto compaction off.

Clarvis – TypeScript, Bun, MIT licensed (github.com/shahsanket2107/clarvis)
- Shipped an open source Claude Code mod with a live HUD for context, tokens, cache hit rate and cost, plus 30 original characters that react to what the agent is doing. 18 test files, CI, no network calls.

LiveMandarin – Swift, Python, on device models (Apple MLX) (github.com/shahsanket2107/livemandarin)
- Wrote an offline Mac menu bar app for live Mandarin and English captions of any system audio. Benchmarked models first: 8 bit ASR matched full precision 30% faster, and a glossary kept terms right 97 to 100% versus about 70% by prompting.

Claude Code Skills – resume-architect, background and voice profile
- Wrote skills that build a one page ATS resume with scripted page fit and parse checks, and hold a verified background profile so every answer draws from the same facts.

Vessel Verify – React, TypeScript, Node.js, Firestore
- Delivered a Carfax style boat history platform solo, with a scraper that merges several sources into one report.
