EDUCATION

Northeastern University, Khoury College of Computer Sciences Boston, MA | Sep 2022 – Jul 2024

Master of Science in Computer Science, GPA: 4.0/4.0 | Coursework: Algorithms, Machine Learning, MLOps, Distributed Systems, Database Design, Data Mining, Information Retrieval

Institute of Technology, Nirma University Ahmedabad, India | Jul 2018 – May 2022

Bachelor of Technology (B.Tech) in Computer Science and Engineering, GPA: 8.68/10 | Coursework: Data Structures, OOP/OOD, ML

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, SQL, Java, Ruby, Swift
AI & Agents	Claude Code (agents, sub agents, skills, plugins, hooks, mods), Claude API, Gemini API, Multi-agent Systems, Knowledge Graphs, RAG, LLM Evaluation, Document AI, MLX
Quant & Research	Walk-forward Validation, Backtesting, Pandas, NumPy, SciPy, scikit-learn, XGBoost, Optuna, numba
Backend & Frontend	Ruby on Rails, Node.js, Express, FastAPI, Flask, Spring Boot, React, Next.js, REST APIs, WebSockets
Infra & Data	Docker, Kubernetes, AWS, GCP, GitHub Actions, CI/CD, RabbitMQ, Redis, MySQL, Firestore

PROFESSIONAL EXPERIENCE

Time Dynamics Inc. – Software Engineer Houston, TX | Oct 2024 – Present

Energy trading startup.

- Own systematic strategies for Chinese commodity futures on a proprietary C++/Python platform, from idea to live monitoring. Testing on unseen data and against random baselines killed most ideas; several now trade live.
- Build and maintain the live trade management system energy traders run on: trade booking, daily mark to market, settlement and automated invoicing and payments (500+ invoices and payments submitted).
- Root caused live trading incidents, such as orders rejected at exchange price limits and positions lost on restart, and added restart checks before every deploy. Matched backtests to the live server trade by trade so research results can be trusted.
- Built an AI analyst that scored commodity trade ideas from fundamentals: one agent per idea searched English and Chinese sources and cut the score when a claim could not be verified, so unproven stories did not drive trades.
- After an agent wrongly said a task could not be done, turned the changing docs of the trading platform into a cited knowledge graph of 832 facts that agent sessions read instead of the full docs, cutting their token use. Generalized it into kg, a Claude Code plugin that builds an audited graph from any doc set and shares it with a team in 1 command.
- Built a 5 agent AI prototype on Claude and Gemini that reads scanned port logs and charter contracts to calculate ship delay fees (demurrage), with Python doing all the money math and a hard stop when key contract terms are missing.
- Built an internal chatbot that answers questions about the trading platform codebase by combining code search with a map of how its parts connect, so engineers get grounded answers without reading the whole codebase.
- For TeamTurbo, the company's AI team workspace app (live since Aug 2025), built the sign in backend, with Google, Apple and Feishu/Lark login and team invites, that turns a website signup into a user in a workspace system owned by another team, plus the entire public website (pricing, payments, docs).

Pairbo Inc. – Software Engineer, 4th employee (part time from Oct 2024) Remote | Sep 2024 – Feb 2025

- Built the admin dashboard a Shopify greeting card startup ran operations from, plus its backend API, checkout integration and remote control of the card printers in merchant warehouses, as it grew from 0 to 10+ merchant partners.

CarGurus – Software Engineering Co-op, Platform as a Service Boston, MA | Jul 2023 – Dec 2023

- Moved developer builds off laptops onto Kubernetes (10% faster) and helped build a tool that standardized deployments, saving about 2 weeks of support work a month.
- Cut dev environment cloud spend 45% with an idle cleanup Slack bot; saved $2.5k monthly by leaving AWS Europe.

Oracle – Software Engineering Intern Bengaluru, India | Jan 2022 – Jul 2022

- Built global rate limiting in Java for a major US carrier 5G network, holding traffic within 5% of limits at a 0.1% loss threshold.
- Synced limits across the server cluster with a federated cache and tested the system to near 100% coverage.

WeLocal – Co-Founder & Full Stack Developer Ahmedabad, India | May 2020 – Jan 2022

- Co-founded and built a COVID era web and mobile app linking shoppers with local stores; 600+ customers in 6 months.

PROJECTS

HQ – command center for AI coding agents, private, in daily use | TypeScript, Bun, React

- Runs a fleet of Claude Code agents from one screen, routing each task to the cheapest model that keeps quality. It acts as my daily engineering team: agents write code, run backtests and check one another, while I make every strategy and deploy call.

Clarvis – open source | TypeScript, Bun | github.com/shahsanket2107/clarvis

- Claude Code plugin showing live cost, context use and rate limits, with animated characters reacting to the agent.

Interpreter – live translation for Mac, private | Swift, Python, Apple MLX, Claude API

- Mac app that live captions and translates English and Mandarin on calls and in person, labelling up to 8 speakers; audio never leaves the Mac. Benchmarked candidate models; a glossary kept key terms right 97 to 100% vs about 70% with prompting.
